Jordan Vance

AI Engineer 📍 Austin, TX | ✉️ jordan.vance.ai@gmail.com | 🔗 github.com/jvance-dev

Professional Summary

Highly skilled **AI Engineer** with extensive experience in developing, training, and deploying high-performance intelligent systems. Expert in utilizing **Python**, **TensorFlow**, and **PyTorch** to build advanced machine learning and deep learning models. Proficient in integrating complex AI solutions into live applications and leveraging **Docker** for seamless production deployment. Specialized in **OpenCV** for computer vision tasks and dedicated to optimizing model inference and system scalability.

Technical Expertise

- **Languages:** Python (Expert), C++, SQL.
- **Deep Learning Frameworks:** TensorFlow, PyTorch, Keras.
- **Computer Vision:** OpenCV, Image Processing, Feature Extraction, Object Detection.
- **Production & Deployment:** Docker (Containerization), Kubernetes, RESTful APIs, CI/CD.
- **Core Competencies:** Neural Network Architecture, Model Optimization, Performance Tuning, Integration & Scalability.

Professional Experience

AI Engineer | Sentient Systems Corp *January 2022 – Present*

- **Developed and trained** sophisticated deep learning models using **TensorFlow** and **PyTorch** for real-time predictive analytics.
- **Integrated** AI models into enterprise-grade applications, ensuring 99.9% uptime and low-latency response times.

- **Optimized** production models by implementing quantization and pruning techniques, reducing inference time by **40%**.
- Utilized **OpenCV** to engineer custom image recognition modules for automated quality control systems.
- Managed the end-to-end deployment pipeline using **Docker**, ensuring consistency across development, testing, and production environments.

Machine Learning Engineer | Visionary AI Solutions *June 2019 – December 2021*

- Architected and built intelligent systems focused on **deep learning** techniques for complex data pattern recognition.
- Collaborated with cross-functional teams to **integrate** machine learning algorithms into existing software infrastructures.
- Leveraged **Python** to build robust data processing pipelines and model evaluation frameworks.
- Improved system performance in production by refactoring legacy code and optimizing **Docker** container configurations.

Key Projects

Automated Vision Suite

- Designed a comprehensive computer vision system using **OpenCV** and **PyTorch** for high-speed object tracking.
- Deployed the solution as a **Dockerized** microservice, allowing for rapid scaling based on demand.

Production Model Optimizer

- Developed a dedicated tool in **Python** and **TensorFlow** to monitor and auto-tune AI model performance in live environments.
- Reduced cloud infrastructure costs by **25%** through efficient resource allocation and model distillation.

Education

Master of Science in Computer Science (Artificial Intelligence Focus) *Georgia Institute of Technology*

Bachelor of Science in Information Technology *University of Texas*

Technical Certifications

- **Certified TensorFlow Developer**
- **Docker Certified Associate (DCA)**
- **Deep Learning Specialization (DeepLearning.AI)**
